

Week09 - Manifest, Component and i18n

Name - Priyabrata Priyadarshi

- 1. manifest.json :** Manifest is an application descriptor which is like a configuration file for your SAPUI5 application.
Component.js : When SAPUI5 runs the application, it searches for the component.js file in your application workspace because this file is the starting point from where SAPUI5 starts to run your application.
- 2.** The component will automatically instantiate the view and use it as the root for this component. rootView specifies the root view of the app.
- 3.** Step 1 - index.html loaded in the browser.
Step 2 - All libraries mentioned in the script tag is loaded
Step 3 - UI5 app is bootstrapped
Step 4 - Component.js is the entry point to the application
Step 5 - ui5 uses manifest.json which is mentioned on the Component.js file
Step 6 - manifest.json is the descriptor of the app which contains routing, models etc
Step 7 - root view is rendered which is mentioned in the manifest.json file (rootView)
- 4. Code - [input \(github.com\)](#)**

The screenshot shows a web browser window with multiple tabs. The active tab is titled 'Input' and displays a form. The browser's address bar shows the URL: `https://port8080-workspaces-ws-shwcj.ap21.trial.applicationstudio.cloud.sap/index.html`. The form has a title 'Input' and a section 'Select Your Language' with a dropdown menu currently set to 'English'. Below this are several input fields, each with a label and a placeholder text: 'Name:' with 'Enter Your Name', 'Employee ID:' with 'Enter Your Employee ID', 'Designation:' with 'Enter Your Designation', 'Place:' with 'Enter Your Place', and 'Department:' with 'Enter Your Department'.
